PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/567,940

Applicant(s)

XU, FENG

Examiner

Michael C. Wilson

Art Unit

1632

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 November 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13, 25, 27, 36 and 38 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13, 25, 27, 36, 38 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB06)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Claims 14-24, 30-35 and 41-44 have been canceled. Claims 1-13, 25-29, 36-40 are pending.

Election/Restrictions

This application contains claims 26, 28, 29, 37, 39 and 40 drawn to an invention nonelected with traverse in the reply filed on 4-23-09. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claims 1-13, 25, 27, 36, 38 are under consideration as they relate to the species *Shigella*.

Applicant's arguments filed 11-25-09 have been fully considered but they are not persuasive.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

The rejection regarding the genus of "non-mammalian" host cell in claims 1 and 8 has been withdrawn in view of the amendment which limits the claims to bacteria (pg 5, lines 3-8, of specification).

The rejection regarding the phrase "promoter functional in eukaryotic cell" in claims 1 and 8 has been withdrawn because the phrase has been deleted.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the

art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-13, 25, 27, 36 and 38 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for expressing an immunogen in vivo by administering a Shigella bacterial host cell to a mammal, wherein said Shigella comprises a plasmid encoding an immunogen, wherein the Shigella is unable to use its own machinery to express the encoded immunogen, wherein the immunogen is expressed in vivo by cells of the mammal, does not reasonably provide enablement for any polynucleotide encoding an immunogen. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims.

The claims encompass using any nucleic acid sequence encoding an immunogen to express the immunogen via a killed Shigella. The specification discusses polynucleotides on pg 4, 2nd paragraph, but the examples are limited to using plasmids. The specification does not correlate the use of plasmids to using linear strands of DNA, RNA, or any virus (including retrovirus, specifically HIV) as the polynucleotide. It would have required those of skill undue experimentation to determine how to use any polynucleotide, specifically linear strands of DNA, RNA, or any virus including retrovirus (especially HIV) to express immunogens in mammals as claimed.

Claim Rejections - 35 USC § 103

Claims 1, 2, 5-8, 9, 12, 13, 25, 27, 36 and 38 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Xu (Vaccine, 2003, Vol. 21, pg 644-648; available

online to the public on Oct. 25, 2002 and published Jan. 2003) as supported by zur Megede (J. Virol. 2000, Vol. 74, pg 2628-2635) in view of Masschalck (Applied and Environmental Microbiology, Vol. 67, No. 1, pg 339-344) and Raettig (Zentralblatt fuer Bakteriologie Mikrobiologie und Hygiene 1 Abt originale A, 1981, Vol. 205, No. 4, pg 511-520, abstract only).

Xu administered attenuated Shigella comprising a plasmid encoding HIV-1 SF2 Gag to mice, which generated an immune response against the antigen (pg 644-645, section 2.1; pg 645-646, section 3.1). The Shigella were attenuated because they had mutant genes (pg 644, col. 2, section 2.1). The promoter used to express the antigen was a CMV promoter as supported by zur Megede (pg 2629, col. 1, line 17), which is "a promoter functional in a eukaryotic cell." Xu did not teach the cell was "unable to use its own machinery to express the encoded immunogen" or inactivating the cells.

However, Masschalck inactivated Shigella using lysozyme under hydrostatic pressure, and Raettig heat inactivated Shigella. These techniques inherently result in Shigella to be "unable to use its own machinery to express the encoded immunogen" as claimed because the cells are inactivated.

Thus, it would have been obvious to those of ordinary skill in the art at the time the invention was made to administer Shigella comprising a plasmid encoding HIV-1 SF2 Gag to mice, which generated an immune response against the antigen as described by Xu using Shigella that had been inactivated using lysozyme treatment described by Masschalck or heat inactivation described by Raettig. Those of ordinary skill would have been motivated to inactivate Shigella using lysozyme treatment

described by Masschalck or heat inactivation described by Raettig instead of merely attenuating the cells to prevent replication of the cells, prevent infection, and prevent dysentery.

Applicants argue Xu invented the claimed subject matter prior to 10-25-02. Applicants provide a declaration by Xu that states the killed *E. coli* and *Shigella* comprising a plasmid encoding gag protein had been used to express gag in a mammal prior to 10-25-02. Applicants' argument is not persuasive. The declaration does not provide notebook dates for the data. The declaration does not address the fact that there were co-authors on the Xu reference that appear to have contributed to the claimed invention. The declaration does not state that Xu alone demonstrated the claimed invention prior to 10-25-02.

2. Claims 1-13, 25, 27, 36 and 38 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Xu (Vaccine, 2003, Vol. 21, pg 644-648; available online to the public on Oct. 25, 2002 and published Jan. 2003) as supported by zur Megede (J. Virol. 2000, Vol. 74, pg 2628-2635) in view of Masschalck (Applied and Environmental Microbiology, Vol. 67, No. 1, pg 339-344) and Raettig (Zentralblatt fuer Bakteriologie Mikrobiologie und Hygiene 1 Abt originale A, 1981, Vol. 205, No. 4, pg 511-520, abstract only) as applied to claims 1, 2, 5-8, 9, 12, 13, 23-25, 27, 34-36 and 38 and further in view of Chang (Applied and environmental microbiology, June 1985, Vol. 49, No. 6, pg 1361-1365, abstract only), Kruithof (Proceedings – Annual Conference, American Water Works assoc. 2000, pg 331-344, abstract only) and the applicant-acknowledged art at the time of filing.

The combined teachings of Xu, Masschalck and Raettig taught administering heat inactivated Shigella comprising a plasmid encoding HIV-1 SF2 Gag to mice to generate an immune response against the antigen (see obviousness rejection above). The combined teachings of Xu, Masschalck and Raettig did not teach the cell was inactivated using UV light exposure or hydrogen peroxide.

However, Chang taught inactivating Shigella using UV light exposure (see abstract) and Kruithof inactivated a variety of bacteria using UV light exposure. Furthermore, applicants acknowledge that inactivating cells was standard in the art at the time of filing including UV light exposure (pg 6, lines 17-19). These techniques inherently result in Shigella to be "unable to use its own machinery to express the encoded immunogen" as claimed because the cells are inactivated.

Thus, it would have been obvious to those of ordinary skill in the art at the time the invention was made to administer inactivated Shigella comprising a plasmid encoding HIV-1 SF2 Gag to mice, which generated an immune response against the antigen as described by the combined teachings of Xu, Masschalck and Raettig using UV light treatment as described by Chang and Kruithof and acknowledged by applicants as being known in the art. It also would have been obvious to those of ordinary skill in the art at the time the invention was made to administer inactivated Shigella comprising a plasmid encoding HIV-1 SF2 Gag to mice, which generated an immune response against the antigen as described by the combined teachings of Xu, Masschalck and Raettig using hydrogen peroxide treatment as described by Kruithof and acknowledged by applicants as being known in the art. Those of ordinary skill would have been

motivated to inactivate *Shigella* using UV light treatment or hydrogen peroxide instead of heat inactivation because Kruithof taught UV treatment and hydrogen peroxide the "ultimate solution for pesticide control and disinfection" (see title).

Applicants argue Xu invented the claimed subject matter prior to 10-25-02. Applicants provide a declaration by Xu that states the killed *E. coli* and *Shigella* comprising a plasmid encoding gag protein had been used to express gag in a mammal prior to 10-25-02. Applicants' argument is not persuasive. The declaration does not provide notebook dates for the data. The declaration does not address the fact that there were co-authors on the Xu reference that appear to have contributed to the claimed invention. The declaration does not state that Xu alone demonstrated the claimed invention prior to 10-25-02.

Conclusion

No claim is allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wilson who can normally be reached at the office on Monday, Tuesday, Thursday and Friday from 9:30 am to 6:00 pm at 571-272-0738.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Peter Paras, can be reached on 571-272-4517.

The official fax number for this Group is (571) 273-8300.
